

DEPARTMENT OF ELECTRICAL ENGINEERING, COMPUTER ENGINEERING AND INFORMATICS

Department of Electrical Engineering, Computer Engineering and Informatics

Presentation of the MSc in Data Science and Engineering

Dr. Panagiotis Ili
Lecturer, program co-coordinator

Department of Electrical Engineering, Computer Engineering and Informatics

It brings together the fields of **Electrical Engineering, Computer Engineering, and Computer Science**

Undergraduate Studies

- Electrical Engineering Degree
- Computer Engineering and Informatics Degree

Postgraduate Studies

- MSc in Data Science and Engineering

Outline

- Analysis of the MSc in Data Science and Engineering
- Research conducted by MSc in Data Science and Engineering Faculty
- Collaborations with Public and Private Sector
- Closing Remarks

Analysis of the MSc in Data Science and Engineering

What is Data Science and Engineering? (1/2)

- The emergence of internet, cloud and multimedia technologies rendered them an integral part of everyday life, both in the workplace and in areas of personal life
- The recording and storage of this data by the providers of these information systems and services is now a routine process, due to the now petty cost of large database systems
- Based on these developments, the design and implementation of large-scale analysis systems is a major technological, scientific and business challenge of our time

Analysis of the MSc in Data Science and Engineering

What is Data Science and Engineering? (2/2)

- Systems that have the ability to process in real-time large volumes of data in order to extract useful information of very high added value to guide decision-making processes
- Typical cases of organizations where huge volumes of data are collected on a daily basis, competitive knowledge industries such as social networks, search engines, pharmaceuticals, large hospitals, defense systems companies, the banking sector (risk assessment, capital management), as well as large retail companies

Analysis of the MSc in Data Science and Engineering

Why study Data Science and Engineering at CUT? (1/2)

- In 2015, it was among the very first Master's degree in data science in Greece, Italy, Spain, Cyprus, Malta, and the Balkans
- It is the new, dynamically emerging technological and scientific field that aims to develop methods and technologies to successfully address precisely the aforementioned business cases
- It is offered by a combination of experienced academics, with extensive international experience in most aspects of Data Science and Engineering

Analysis of the MSc in Data Science and Engineering

Why study Data Science and Engineering at CUT? (2/2)

- It encompasses large-scale data processing, storage, and management systems
- It teaches highly-complex statistical analysis methods and systems to predict and conclude in uncertainty environments, to apply optimal decision-making techniques based on the results of the analysis, and to employ large-scale network theory for inference and analysis in large-scale systems

Analysis of the MSc in Data Science and Engineering

Program's Purpose and Objectives

Offer students high quality advanced education in the field of Data Science and Engineering

Meet the modern needs of industry and market globally and offer students opportunities for original research and contribution in the field of Data Science and Engineering

Educate students from a variety of academic backgrounds, ranging from computer engineers, mathematics, to mechanical engineers or other related subjects

Help students specialize in cutting-edge technology areas with a Master's thesis, supervised by the department's academic staff

Analysis of the MSc in Data Science and Engineering

The graduates of our program are able to (1/2)

- Formulate appropriate questions that can be answered using the data available in an organization, and to interpret the results of their decision-making analysis in a correct and strategic way
- Develop and efficiently manage very large-scale data storage and processing systems
- Develop appropriate models of statistical machine learning to draw high value-added conclusions and forecast future trends/behaviours using the available data

Analysis of the MSc in Data Science and Engineering

The graduates of our program are able to (2/2)

- Develop and implement efficient software systems for the analysis of large-scale real-time data
- Understand the legal and ethical dimensions and obligations arising from data management and analysis
- Choose the appropriate hardware architectures for the purposes of data analysis of each different organization

Analysis of the MSc in Data Science and Engineering

Duration of the MSc

PROGRAM REQUIREMENTS	ECTS
Compulsory Courses (7 courses)	53
Elective Courses (1 course)	8
Postgraduate research work (Thesis)	30
Total ECTS	91

- 3 semesters plus summer period (full-time study)
- 8 semesters (part-time study)

The first two semesters entail 30 and 31 ECTS

The third (fall) semester and the summer period entail 30 Thesis ECTS

Analysis of the MSc in Data Science and Engineering

Academic Transcripts, and a Curriculum Vitae (C.V.)

University degrees or a confirmation letter that states that the candidate is expected to graduate before he/she starts the postgraduate programme

Student Admission Requirements

A brief Personal Statement of goals and research interests (approximately 500 words) in which the candidate explains why he/she wishes to pursue a graduate programme at CUT

Any other certificates and documents, such as samples of relevant academic or professional work (publications, articles, portfolios etc.) according to the internal rules of graduate studies of each Department where the application is submitted

Spring Semester								
5	Elective	Natural Language Processing	CEI 525	3	50	13	39	8
6	Compulsory	Advanced Topics in Data Processing Systems	CEI 526	3	50	13	39	8
7	Compulsory	Research Methods in Comp. and Informatics Engineering	CEI 527	4	50	13	52	7
8	Elective	Deep Learning	CEI 528	3	50	13	39	8
9	Compulsory	Web Security and Privacy	CEI 529	3	50	13	39	8

Analysis of the MSc in Data Science and Engineering

Teaching Methods

- Lectures/presentations (PowerPoint-based, interactive, videos)
- Use of computing equipment and networks infrastructure in courses related to specialized topics (e.g., networks, large-scale data processing, etc.)
- Supporting/supplementary lectures with exercises and applied case-studies
- Case studies and real-world group projects for practical courses (e.g., Software Eng., Data Science, Network Science, Web Security, etc.)
- Exposure and experience in a variety of computing tools and programming platforms

Analysis of the MSc in Data Science and Engineering

Assessment of Learning Outcomes

Presentation of research articles

Oral questions and answers in the class

Summaries of research papers

Homework

Group projects

Final Exams

Consultation with thesis advisor

Analysis of the MSc in Data Science and Engineering

Employment Prospects for Students/Graduates (1/2)

- We create the first generation of graduates in the European South with high-level qualifications that allow them to claim a competitive share in the international division of work in this fast-growing and very well-paid subject of Data Science and Engineering
- We give students the opportunity to apply their new knowledge to interdisciplinary projects, simulating the real working conditions of the Data Scientist and Engineer
- Students develop skills in the use of the most modern tools and analytical methods, and on how the results of the analysis should be best used by an organization

Analysis of the MSc in Data Science and Engineering

Employment Prospects for Students/Graduates (2/2)

- All our graduates are hired by local and international companies (e.g., Telefonica, UCL, AMDOCS, NCR, MPI-SWS, Forex Companies, Foody, etc.)
- The degree has built a very good reputation among local industry stakeholders
- Top graduates are competitive for PhD studies (e.g. enrolment in PhD programs in UCL, TU-Berlin, etc.)

Analysis of the MSc in Data Science and Engineering

After Graduation...

- Students have the opportunity to continue their studies in a PhD at our university and leading universities abroad (e.g., UCL)
- At the same time, several students work in the numerous funded research projects of the department
- The department also offers scholarships based on performance and socio-economic criteria
- Due to the option of part-time attendance, our program attracts excellent professionals currently active in the industry

Closing Remarks

- ❑ Emphasis on Teaching, Research and Contribution to Society

- ❑ So far:
 - Our teaching quality is recognized by the high employment rate of our graduates and the good reputation of the MSc degree among undergraduates and academics

 - The faculty is very successful in attracting external research funding and publishing in top-tier venues

 - The department has strong links with society, market and industry (seminars & training sessions, technology awareness, social inclusion, creation of new jobs, etc.)

Closing Remarks

Thank you!

<https://www.cut.ac.cy/faculties/fetecei/degrees/postgraduate/msc-data-engineering/>

The screenshot displays the website for the Department of Electrical Engineering, Computer Engineering and Informatics at the Cyprus University of Technology. The page is titled 'Data Science and Engineering' and features a navigation menu with options for 'STRUCTURE', 'MODULES', 'ADMISSION', and 'MODULE DESCRIPTIONS'. The 'STRUCTURE' tab is active, showing a list of 'PROGRAMMES OF STUDY' including 'Doctoral Studies', 'Postgraduate Programmes' (with 'MSc in Data Science and Engineering' selected), and 'Undergraduate Programmes'. Below this, there are sections for 'MODULE DESCRIPTIONS', 'DEPARTMENT STAFF', and 'RESEARCH LABS'. The main content area provides a 'Structure' overview, starting with the question 'What is a degree in Data Science and Engineering?' and listing two bullet points: 1) The emergence of internet, cloud and multimedia technologies as an integral part of everyday life, resulting in huge volumes of data being produced by users of information systems on a daily basis. The recording and storage of this data by the providers of these information systems/services is now a routine process, due to the now petty cost of large database systems. 2) Based on these developments, the technological, scientific and business challenge of our time is the development of large-scale analysis systems. That is, systems that have the ability to process in real-time large volumes of data in order to extract useful information of very high added value to guide decision-making processes. Highly competitive

On the right side of the page, there are two call-to-action buttons: 'Contact us' and 'Submission of application', both with right-pointing arrows.
